

## Akatherm pipe

### 4.2 Pipe

The Akatherm product range includes two kinds of HDPE pipe. Standard pipe according to EN 1519 and the Akatherm tempered pipe. The tempered pipe is produced according to the standard EN 1519 but has undergone an extra heat treatment after extrusion. The result is less shrinkage when cooled down from high operational temperature. This gives less stress on joints resulting in a longer life of the pipe system.

The Akatherm tempered pipes are predominately used in applications where the temperature of the pipe can get relatively high or vary considerably. Both can be caused by ambient temperature or temperature of the medium.
