### 10.1.9 Heating element

The Akasion roof outlets type 'H' are equipped with a heating element. When connected to a thermostat that can be adjusted between  $-15^{\circ}\text{C}$  and  $+15^{\circ}\text{C}$ , the system can be switched on between  $-15^{\circ}\text{C}$  and  $+5^{\circ}\text{C}$ . This way the rainwater will always be able to flow through the roof outlet. For the schematic see illustration 10.61.
