Parthos Panningen

Parthos is a manufacturer of movable wall systems and folding doors. One of their business centres is located in Panningen (The Netherlands). Parthos extends her business centre with a warehouse and processing hall. This industrial building has a surface of 2,500 m².

The Challenge

This project consists of extending the existing building of Parthos. The new hall must smoothly connect to the existing building. The main goal is to save space in the new hall in order to fully use the space for warehouse and processing purposes.

The solution

The new hall is provided with the Akatherm Siphonic Roof Drainage System. By using one stack on each of the two sides more workable space is gained, also for other installations. The project clearly shows that the Siphonic Roof Drainage System is also successfully applicable to buildings with a smaller roof.

About Akatherm

The demand for inspiring, challenging and highly productive environments means that every modern construction project represents a unique challenge. As experts in Specialist Drainage, Akatherm understands that what we deliver to a project is just as important as what is ultimately removed from a building, thanks to our high performance technology.

Rely on our knowledge, consultation, support process and industry-leading systems to provide the confidence to achieve your ambitions.
